

Suriyati KALMAN and Vui Heng CHONG

A 48-year-old lady was admitted with general body weakness and hypoxia. The patient was bedbound and fully dependent for her activities of daily living. Her past medical history included Acute Motor Axonal Neuropathy (AMAN), osteoarthritis and rheumatoid arthritis. Her recently changed urinary catheter and urine bag was noted to be discoloured (**Panel**).

Q: What is the diagnosis?

Answer: refer to page 61
